

Razor Tracking now integrates directly with the **John Deere Operations Center**, providing construction fleets with a unified view of their equipment, vehicles, and job sites. This two-way, **AEMP 2.0-compatible** integration allows customers to see and manage data in either platform—without changing existing workflows.

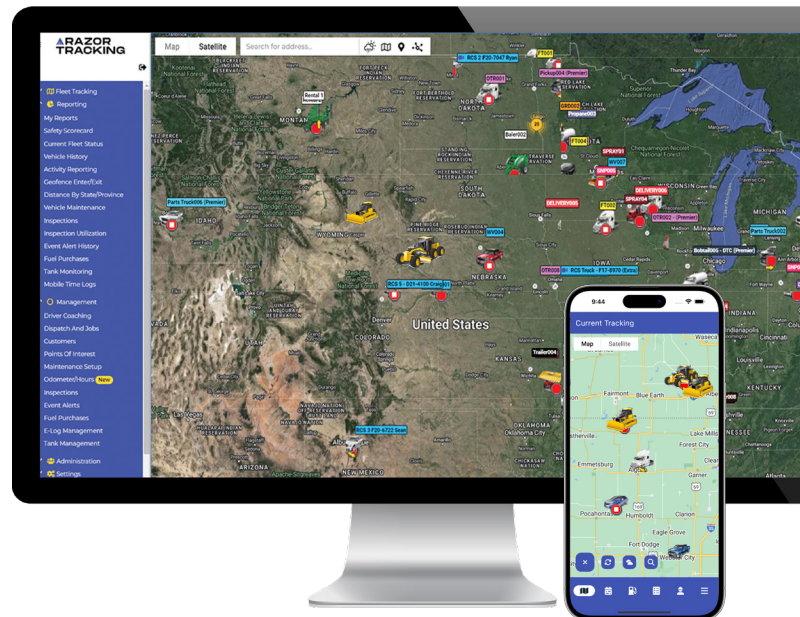

Designed specifically for **John Deere Construction** customers, the integration delivers real-time equipment tracking, theft prevention, engine diagnostics, and maintenance alerts alongside routing, dispatch, and job scheduling. By bringing **all fleet data into one view**, construction professionals gain better visibility, improved efficiency, and greater peace of mind across every job site.

JOHN DEERE RECOMMENDED TO REMOTELY MONITOR SUPPORT VEHICLES
